Data
資料
The world is rife with uncertainty. Decisions are often made in the face of incomplete data, imperfect knowledge and random variation. Statistics is the study of such variables through the development and application of analytic and quantitative tools that involve logical thinking, problem formulation, probability reasoning and intensive data analysis. The discipline is applicable to almost all areas of science, business and research and to many practical areas in which data are collected to support the decision-making process. Therefore, statistics is often described as the generic science of drawing conclusions in the presence of uncertainty.

Our Majors cater for students with a good mathematics background and are designed to meet the steadily rising demand for specialist statisticians and analysts in government, industry, research and teaching in local and overseas institutions. Students interested in the subject of statistics may choose Decision Analytics, Risk Management or Statistics as their major or as an additional (second) major or minor. Minor in Actuarial Studies, in particular, is a good option in combination with the aforesaid Majors.

Given the expanding use of data in all realms of society, the Department of Statistics and Actuarial Science encourages students from all fields to consider pursuing a Major in Decision Analytics, Risk Management or Statistics.  We have students who are pursuing double majors in a variety of fields of application, along with minors from a wide range of departments. Meanwhile, a Minor in Risk Management or Statistics can be an excellent complement to a degree in almost any fields.

Decision Analytics Major aims to equip students with the skills and expertise in leveraging and managing big data in real time amidst an upsurge of digital data produced worldwide nowadays. It enables students to examine, translate and classify data, uncover hidden patterns and unknown correlations, and most importantly, pinpoint precisely the most critical areas and the implications suggested by the data. With a coordinated approach to teaching across different disciplinary fields, namely computer science, mathematics and statistics, the Major is designed to provide students with solid training in making digitized information a strategic part of critical decision making and resource allocation with greater clarity and accuracy.

Decision analytics promotes the applications of computer technology, operational research, mathematical and statistical modelling, and simulation to decision-making and problem-solving in all organisations and enterprises within the private and public sectors. Applications of decision analytics are virtually to all kinds of disciplines: science, social science, education, engineering, medicine, economics, business, etc. Students will acquire a competitive advantage in becoming vital assets of any organisations which need to make decisions.

Required Courses (96 credits)*

Introductory Level Courses

- STAT2601 Probability and statistics I
- STAT2602 Probability and statistics II
- SCNC1111 Scientific method and reasoning
- SCNC1112 Fundamentals of modern science
- COMP1117 Computer programming
- COMP2119 Introduction to data structures and algorithms
- MATH1013 University mathematics II
- MATH2014 Multivariable calculus and linear algebra

Advanced Level Courses

- STAT3600 Linear statistical analysis
- STAT3612 Statistical machine learning
- STAT4609 Big data analytics
- COMP3278 Introduction to database management systems
- MATH3904 Introduction to optimization

Disciplinary Electives

- At least 12 credits selected from the following courses:
  - STAT3620 Modern nonparametric statistics
  - STAT3621 Statistical data analysis
  - STAT3622 Data visualization
  - STAT3655 Survival analysis
  - STAT4011 Natural language processing
  - STAT4023 Medical image analysis
  - STAT4601 Time-series analysis
  - STAT4602 Multivariate data analysis
  - STAT4610 Bayesian learning
  - COMP3250 Design and analysis of algorithms
  - COMP3270 Artificial intelligence
  - COMP3323 Advanced database systems
  - COMP3407 Scientific computing

Capstone Requirement

- At least 6 credits selected from the following courses:
  - STAT3799 Directed studies in statistics
  - STAT4710 Capstone experience for statistics undergraduates
  - STAT4766 Statistics internship
  - STAT4799 Statistics project (12 credits)

All courses are 6-credit bearing unless otherwise stated.

* The programme structures of the Majors are subject to change. For the most updated syllabus, please visit the Science Faculty’s website.
## The Risk Management Major

The Risk Management Major aims to equip students with the skills and expertise to master the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasise fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific risk management disciplines or an extension of knowledge aiming to give students more modelling, technical and analytical skills in risk management, including discrete-time models in finance, stochastic calculus with financial applications, and financial time series modelling. Through participating in experiential learning activities including research-based projects, industrial internships and overseas exchanges, students could enhance their knowledge in risk management, increase exposure in managing risk in practice, and improve their thinking and communication skills.

Career opportunities are available in financial institutions and large corporations including banks and consulting firms. Graduates readily find employment in government, banking, finance, risk management, insurance, IT, marketing research and many other related sectors in which expertise in quantitative risk analysis and management is in great demand due to the data-driven environment nowadays. A growing number of professions depend on such an expertise to help manage risk in the midst of increasing uncertainty in the economy and an upsurge in financial and operational crises.

## The Statistics Major

The Statistics Major centres on the study of statistics, a scientific discipline characterised by the development and applications of analytic and quantitative tools which involve logical thinking, problem formulation, probability reasoning and intensive data analysis. The programme aims to equip students with powerful mathematical, analytical and computational skills, which are in great demand in practical areas where data are obtained for the purpose of finding information in support of decision making. It helps students to build a strong background in statistical concepts, and provides broad and solid training in applied statistical methodologies. Indeed, such applications of statistics as an analytical tool have been given growing prominence in the modern society. Therefore, the curriculum is constantly revised to meet a steadily rising demand for specialist statisticians or quantitative analysts in government, business, finance, industry, as well as in research and teaching in local and overseas institutions.

Graduates of the Statistics Major readily find employment in banking, finance, risk management, insurance, IT, marketing research, environmental protection, government, hospitals, scientific research, and universities. Statisticians often play critical roles in large-scale and multi-disciplinary projects, providing guidance on all aspects of data collection and determining objective findings. Statistics is a profession which is growing rapidly all over the world, as the quantitative demands from every field rise. The degree from HKU provides a superb training for this profession.

**MINOR OPTIONS**

Students majoring in other disciplines are welcome to minor in Risk Management or Statistics. A minor in Actuarial Studies is also available to eligible students, particularly those majoring in Decision Analytics, Risk Management and Statistics.

---

### Minor in Actuarial Studies

The Minor in Actuarial Studies provides students with an introduction to the basic concepts and methodologies of actuarial science. The curriculum is specially designed to boost the interest of students from different majors in actuarial science and to strengthen their confidence and ability to solve a range of mathematical, financial, economic and investment-related problems.

### Minor in Risk Management

The Minor in Risk Management aims to provide students with the basic concepts of risk management and the fundamental skills needed to perform various statistical techniques to manage risk. The curriculum is specially designed to boost the interest of students from different backgrounds in risk management and to complement their major area of study.

**Introductory Level Courses**

### Minor in Statistics

The Minor in Statistics is specifically designed to cater for the general needs of non-statistical disciplines and to provide basic training in statistical methodologies and applications to practical problems. Its aim is to provide students with the rigorous quantitative reasoning that has become an indispensable skill in nearly all disciplines.

The programme structures of the Minors are subject to change. For the most updated syllabus, please visit the Science Faculty’s website. All courses are 6-credit bearing unless otherwise stated.
Internship Programme

There is no better training than obtaining solid hands-on experience in the real workplace. Our Internship Programme serves precisely this purpose. As an intern, the student will gain insight into the challenging world and daily activities of a data analyst, a risk manager and a statistician while strengthening his/her technical, analytical and communication skills.

Under the Internship Programme, students who declare Decision Analytics / Risk Management / Statistics as their first Major are eligible to use the Department’s Internship / Job Online-application System, where related internships and other job openings including graduate positions will be posted. Our alumni may wish to know that normally they will still be eligible to use the System after graduation from our Department.

The Internship Programme assists students by advertising part-time, summer, temporary and full-time internship positions, sending the CVs of interested students to employers, and arranging interviews for shortlisted students. For details about our Internship Programme, please visit: https://saasweb.hku.hk/teaching/internship-details.php

Student Sharing

Lao Ka Chon (BSc (Major in Risk Management))
Census and Statistics Department (2021)

In this internship period, I learnt to prepare the job interview in a better way. If students want to apply for a position, they should fill out the company’s nature and required knowledge. They can think of the challenging questions which is possible to be asked by the interviewers. For students who wish to apply for similar positions to it, they should understand themselves and strengthen their advantages in data processing. And students can keep learning new technical skills, for example the programming skills which is beneficial in the statistic related working field. During the job period, I learnt to ask question in a proper way and not to work on tasks under the situation that something is unclear. It would waste time and effort if we misunderstood the need of the tasks. Students should not be afraid of asking simple questions and try to understand all the details.

Me (fourth from the left) with the fellow interns who nominated me for the AIA Actuarial Internship Scholarship Programme.

Partial list of companies participating in the Department’s internship programme:
- AXA Insurance
- Bank of China (Hong Kong) Limited
- BNP Paribas
- Census and Statistics Department, HK SAR
- Citibank
- Deutsche Bank AG
- Ernst and Young
- FTSE
- Guy Carpenter
- Hang Seng Bank
- HSBC Life
- Hong Kong Exchange and Clearing Ltd
- Hong Kong Institute for Monetary Research
- Hong Kong Monetary Authority
- Hong Kong Observatory
- Hong Kong Police Force
- Hong Kong Public Libraries Head Office
- Hospital Authority
- JP Morgan Chase & Co
- Microsoft Hong Kong Limited
- SAS Institute
- Standard Chartered Bank

Chan Chin Kiu (BSc (Major in Risk Management))
FWD Life Insurance Company (Bermuda) Limited (2022)

An internship helps one to gain a good insight in how the industry works and allows one to gain new knowledge. During my internship period, I was awarded with new knowledge such as user acceptance testing and programming. These are some essential skills in the statistics-related working field, ensuring the system in the company can be implemented appropriately. By extending the lectures into reality, one can learn to manage and perform tasks within the company professionally. Moreover, internship opportunities enhance one’s personal growth and development. Through asking questions and communicating with other interns and staff, I have learnt to be a better communicator, as well as taking efficiently and effectively to bring out my message. Also, I have understood the importance of finishing tasks in a timely manner, as it may affect others’ working schedules since we are working as a team. Internship therefore trains your attitude and manner towards work.

An internship experience is useful as it helps one to discover his strengths and weaknesses, which leads to self-understanding. Through practical experiences, it further develops and provides one guidance of the future career path, influencing future goals and accomplishments.

All in all, internship programmes are valuable for students in university. Not only do you learn new skills and knowledge, they also promote personal growth and develop your future career. Treasure each of the opportunities to explore your future dreams and goals.

HKU Worldwide Undergraduate Student Exchange Programme

HKU’s Worldwide Undergraduate Student Exchange Programme offers exchange opportunities for students in world-renowned universities such as Harvard University, Columbia University, McGill University, the University of Toronto, the University of California at Berkeley, Davis, Santa Barbara and Los Angeles, the University of Melbourne, the University of British Columbia, the University of New South Wales, the University of Amsterdam, Georgetown University and the University of Waterloo. The following are messages from some of the Department’s former exchange students.

Li Ka Ho (BSc (Major in Risk Management))
Exchange at Harvard University, USA, 2012

Living in another country definitely allows you to immerse yourself in another culture that you are not familiar with. I could never imagine that trains could be routinely delayed for an hour, that people could have their meals at random times and that could people work so hard. The US also has a totally different learning environment from Hong Kong. A combination of six-hour lessons and eight hours of homework is definitely hardcore. Students at Harvard don’t really have too much time for entertainment. Instead, we just spent time together at weekends in a café, pub or park or stayed in the dormitory. The experience granted me an opportunity to meet people from all over the world.

QIAN Zhaozhi (BSc (Major in Statistics))
Exchange at University of California, Davis, USA, 2014

My exchange experience at UC Davis is certainly memorable. I feel proud and lucky that I had such an opportunity to explore a different culture. Everything was fresh: Davis is a place just 30 minutes by car from the nearest Walmart. It is also a place where you could enjoy a 2000-square-meter state-of-the-art gym all year round. The majority of the people in town work for the University, making Davis one of the most educated and safest towns in the US. Collaboration and problem-solving skills are highly emphasized. It was beyond my imagination that students are allowed to solve problems in written assignments in groups. Statistics there was pragmatic. Students got hand-on experience in investigation design and data analysis. The exchange was eye opening and rewarding. I think I made a wise choice to go exchange in UC Davis.

Au Chun Fai (BSc (Major in Risk Management))
AIA Company Limited, Hong Kong (2021)

The Department gave us lots of opportunities to learn, to improve, and to breakthrough. But what is vitally important is that whether we grab each of the chance and go for it. Internship is our opportunity to prove ourselves, to challenge to our limits and to utilize what we have learnt. Study and practice have an invisible link with each other. We may think we are a well-educated intellectual, but we can only see our weaknesses through real-life practice.

Winning the Scholarship ($8,000 in total: 2 winners from 20 students). (Right: Chief Actuary Mr. HK. Oiwa)

Chau Hoi Lam (BSc (Major in Risk Management))
Prudential Services Limited (2022)

I have been working in Prudential for 6 months and it is a valuable experience for me to learn on site. I was interning in the EEV reporting team which help to conduct EEV report on regular basis. It allows me to learn more in-depth about how insurance company are showing their business performance to the public and different types of reporting standard.

It is also a great opportunity to meet new people, managers and fellow interns. The managers are so supportive and nice. I have also made friends with interns from different teams and different universities.

We can share our experience working in different positions.
Prizes & Bursaries

Many scholarships are available to our students in each year of study. The following are examples of some of the scholarships which have been awarded to our students.

- C.V. Starr Scholarship
- Centenary Scholarship Fund Award
- CMA and Donors Scholarship
- HKSAR Government Scholarship
- HKU Foundation Entrance Scholarship
- HKU Worldwide Undergraduate Student Exchange Scholarships
- HSBC Hong Kong Scholarship
- Kai Chong Tong Scholarship
- Lee Shau Kee Scholarships
- Li Po Chun Charitable Trust Fund Undergraduate Scholarship
- Science Entrance Scholarship
- Sports Scholarships
- The Bank of East Asia Scholarship and more

For details about all HKU’s scholarships, please visit: https://www.scholarships.hku.hk

Dr Patrick S C Poon Scholarship in Statistics

In 2012, Dr Patrick S C Poon made a generous pledge to the University to establish four scholarships in support of outstanding undergraduates who wish to pursue studies in Decision Analytics, Risk Management or Statistics in the Department of Statistics and Actuarial Science. The scholarships will be awarded annually on the basis of academic merit to final-year candidates pursuing a first major in Decision Analytics, Risk Management or Statistics. In addition, a candidate’s participation in extra-curricular activities and higher performance in an interview, will also be treated as helpful supplementary information in the selection process. Each scholarship is valued at HK$50,000, and is awarded on a non-renewable basis.

Ho Kam Chiu Lo Lai Ching Memorial Scholarship

In 2021, Mr SK Ho (BScSc 1980; MSocSc 1987) pledged a generous donation to establish a Scholarship in honour of his parents. The Scholarship shall support students at the Department of Statistics and Actuarial Science to engage in overseas enrichment programmes or exchange studies, and gain exposure in different countries around the globe. Three scholarships, each of the value of HK$20,000, are made available each academic year by the Department of Statistics and Actuarial Science. The Department awards these scholarships annually on the basis of academic merit.

Saw Swee Hock Statistics Scholarship

In 2005, Professor Saw Swee Hock, founding Professor of Statistics of the University from 1969 to 1971, donated a capital sum of HK$300,000 to set up a scholarship in recognition of the academic achievement of BSc graduates whose first majors are in the Department of Statistics and Actuarial Science. Two awards of HK$35,000 each shall be awarded annually on the basis of academic merit.

Statistics and Actuarial Science (SAAS) Scholarships

In addition to the aforementioned university-wide scholarships, 28 scholarships, each worth between HK$4,000 and HK$20,000, are made available each academic year by the Department of Statistics and Actuarial Science. The Department awards these scholarships annually on the basis of academic merit to outstanding students in different years of study who are pursuing a BSc degree in Actuarial Science or a first major in Decision Analytics, Risk Management or Statistics.

YF Life Scholarship in Actuarial Science and Risk Management*

In 2023, YF Life Insurance International Limited kindly pledged to establish the YF Life Scholarship in Actuarial Science and Risk Management at The University of Hong Kong, with an objective of nurturing talents for the insurance industry. Five scholarships, each of the value of HK$15,000, shall be awarded annually to outstanding undergraduate students in the Bachelor of Science in Actuarial Science or Bachelor of Science (Major in Risk Management) degrees on the basis of academic merit and performance in an interview, if arranged by the Selection Committee.

For more details about the Department’s scholarships, please visit: https://saasweb.hku.hk/programmes/scholarship.php

*To be approved by the University

Scholarships

Dr Patrick S C Poon Scholarship in Statistics

In 2012, Dr Patrick S C Poon made a generous pledge to the University to establish four scholarships in support of outstanding undergraduates who wish to pursue studies in Decision Analytics, Risk Management or Statistics in the Department of Statistics and Actuarial Science. The scholarships will be awarded annually on the basis of academic merit to final-year candidates pursuing a first major in Decision Analytics, Risk Management or Statistics, and who has obtained First Class Honours and the highest average marks in the papers taken for Statistics courses.

Saw Swee Hock Statistics Scholarship

In 2005, Professor Saw Swee Hock, founding Professor of Statistics of the University from 1969 to 1971, donated a capital sum of HK$300,000 to set up a scholarship in recognition of the academic achievement of BSc graduates whose first majors are in the Department of Statistics and Actuarial Science. Two awards of HK$35,000 each shall be awarded annually on the basis of academic merit.

Statistics and Actuarial Science (SAAS) Scholarships

In addition to the aforementioned university-wide scholarships, 28 scholarships, each worth between HK$4,000 and HK$20,000, are made available each academic year by the Department of Statistics and Actuarial Science. The Department awards these scholarships annually on the basis of academic merit to outstanding students in different years of study who are pursuing a BSc degree in Actuarial Science or a first major in Decision Analytics, Risk Management or Statistics.

Student Society

The Statistics and Actuarial Science Society (SASS) has been serving students of the HKU Department of Statistics and Actuarial Science since its establishment in 1969. Over the years, the student society has grown into a large family with thousands of members.

The SASS has dedicated itself to promoting the study of actuarial science, decision analytics, risk management, statistics and applied artificial intelligence. It also serves to provide a sense of unity, promote the welfare of its members and maintain a harmonious relationship between staff members and students.

Every year, the SASS organises a variety of functions, including the alumni mentorship scheme, annual dinner, annual survey, firm visits and many more. The SASS works closely with the Department and serves its members with enthusiasm. They strive in the best interests of their members and aim to ensure they enjoy a fruitful and joyful university life.
The world is becoming increasingly quantitative and data-focused in nature. Many professions depend on statistical knowledge to make decisions in the midst of economic uncertainty and operational crises. As the demand for quantitative and analytical skills continues to rise in virtually every field, an increasing number of talents in decision analytics, risk management and statistics will be needed within the private and public sectors in the society. Our majors provide a comprehensive training for those who wish to follow a career path in this direction.

Our graduates readily find employment in various sectors, including but not limited to the government, banking, finance, risk management, insurance, IT, marketing research, healthcare, hospitals, environmental protection, scientific research, academia and other related sectors in which statistical and analytical expertise is needed due to the data-driven environment nowadays. They often play important roles in large-scale, multidisciplinary projects involving data analytics, providing guidance on all aspects of data collection and producing objective findings. Our graduates are also sought after by top graduate schools and research firms worldwide.

In this new era of big data, it is projected that job opportunities in decision analytics, risk management and statistics will remain favourable in the foreseeable future.

To date, our graduates have found employment in the following organisations (positions in brackets):

- ABN AMRO N.V., Private Banking [Special Products Assistant]
- Acorn
- Ariva General Insurance Limited [Analyst]
- Bank of Communications [Credit Analyst]
- Census and Statistics Department, HKSARG [Commissioner / Senior Statistician / Statistician / Research Manager]
- Citibank (Hong Kong) Limited [Vice President]
- DKR Oasis, HK (Product Controller) First Shanghai Capital Limited [Strategist]
- FTSE
- Hang Seng Bank [Assistant Database Marketing Manager, Knowledge Management Department]
- Hong Kong Exchanges and Clearing Limited [Senior Officer]
- Hong Kong Monetary Authority [Senior Manager]
- Hospital Authority [Research Officer]
- HSBC [Assistant Manager, Campaign Management, Marketing]
- HSBC [Credit and Risk Manager, Asia Pacific Consumer Credit Risk]
- Independent Commission Against Corruption
- Magna Finance Limited [Financial Analyst, Investment]
- Marketing Decision Research (Pacific) Limited [Senior Research Executive]
- Pacific Century Insurance Company Limited [Actuarial Analyst]
- SAS Institute Limited [Senior Analyst]
- Sun Life Financial [Analyst]
- Synovate China Limited [Market Researcher]
- Willis Towers Watson [Analyst]

The Department of Statistics and Actuarial Science has introduced the Career Advising Programme (CAP) to help students pinpoint their strengths and weaknesses in terms of interview/CV writing skills and better prepare students to seize career opportunities readily. Besides one-to-one career consultation, the CAP will organise other career-related activities to deepen students’ understanding of the industries.

The following is a non-exhaustive list of services and activities provided under the CAP:

- Tailored consultation on CV and cover letter writing
- One-to-one or group consultation on interview skills, e.g. mock interview
- Tailored modules of Professional Preparation Programme (PPP)
- Career talks
- Company visits
- Alumni sharing
- Corporate Mentorship Programme

Testimonials from Graduates

TAO Yufeng
2021 BSc graduate (Major in Decision Analytics)
Over the four years growing with SAAS, I have learned an incredible amount both academically and professionally. Professors are kind and willing to help, not just in the classroom. A fulfilling research journey awaits if you actively approach them, and their valuable advice will guide you to the right path. Career advising and professional engagement are among the highlights as well. There is a wide array of internship opportunities along with various company visits and corporate mentorship, thanks to the department’s network. Most importantly, the program offers flexibility to explore what fits you the most. I’m grateful to have spent a summer researching quantitative trading and another working in data analytics. The experiences brought me clarity about my future career.

ZHAO Jie
2020 BSc graduate (Major in Risk Management)
When I reflect on my four years in the University of Hong Kong BSc(4) program, I conclude that the experience not only made me a better student, but also prepared me to be a confident, independent and open-minded gift. Through the BSc program, I met the professors with a wide range of knowledge. Also, with the incredibly supportive classmates and teamwork opportunities, these form a wonderful memory in my life, and the best educational experience I’ve had. Having been shaped in part by the collegial and creative, yet rigorous, environment at HKU, I found myself able to communicate, innovate, and collaborate in ways that enabled me to build a successful communications consulting practice, independent thinking ability and eventually to get my dream job— the investment analyst in an Asset Management Firm in central.

HUANG Feiqing
2019 BSc graduate (Major in Statistics)
One of the best things in life that happened to me is to spend my undergraduate years in HKU under the Department of Statistics and Actuarial Science. I consider myself as the kind of person who can never stay put and is always keen on exploring new experiences. Luckily, my Department provides me with a diversity of opportunities that satisfy my cravings for inspiration and all-round development. There are overseas research fellowship scheme and career advising programme (CAP) tailor-made for Statistics and Actuarial Science students. By fully utilizing the resources posted on the CAP platform, I managed to obtain a quanta internship in an investment firm which turned out to be a dramatic turning point of my life. Aspired by my research topic during the internship, I decided to further pursue a PhD study into this specific area in HKU. And with the wholehearted support from my professors and the Department, I am granted with the Hong Kong Postgraduate Fellowship for my upcoming PhD study.

I remember seeing a saying in a blog that touched me deeply in the heart. It says, “When you say yes to an opportunity that is calling you, even when you are scared, even if you are not sure you are ready, you build your confidence. When you say yes, you will evolve.” The accessibility to abundant opportunities is what I am truly grateful for in this program. Because it gives me a choice to say yes and prepares me to embrace the challenge when the time arrives.

Other Information

Computing Facilities
One of the primary aims of our majors is to equip students with powerful mathematical, analytical and computational skills, all of which are in great demand in practical areas where data are gathered and analysed to support the decision-making process. The Department of Statistics and Actuarial Science currently houses a large statistical computer laboratory, supplemented by a smaller one, both of which are equipped with up-to-date statistical software for teaching and learning and research purposes.

World-class Research and Excellence in Teaching and Learning
Since its establishment in 1967, the HKU Department of Statistics and Actuarial Science has always dedicated itself to reaching world-class standards with aspirations to be an international centre of excellence for both research and teaching and learning (T&L). Underpinning this enduring dedication is the Department’s dynamic research profile with wide-ranging areas of expertise. Over the years, the Department has been awarded General Research Fund (GRF) grants by the University Grants Committee (UGC) to undertake numerous research projects in statistics and actuarial science.

According to the UGC’s Research Assessment Exercise (RAE) 2020, we rank No.1 in terms of the percentage judged to meet the standard of 4-star, the highest ranked level for overall quality profile of research, out of seven comparable units of assessment for Mathematics and Statistics. Our impact and environment sub-profiles even reach 100% of 4-star quality, i.e. outstanding in terms of reach and significance, and world-leading in terms of vitality and sustainability respectively, as defined by the UGC.

The RAE is part of the UGC’s commitment to assessing the performance of the UGC-funded universities in Hong Kong. It is a criterion-referenced exercise against agreed quality levels as defined by international standards. Over the years, the outcome of the RAE has provided guidance for universities’ developments in respect of pursuing research excellence. Universities’ performance in the RAE also informs the allocation of part of the Research Portion of the Block Grant.

Our Teaching Staff and Research Fields

Dr. Tim J. BOONE
BSc, MSc, PhD Tilburg
Actuarial Science, Capital Allocation; Game Theory; Insurance Economics; Optimal (Re)insurance; Longevity Risk Modeling; Risk Sharing

Dr. Y. CAO
BSc, PhD, MS, Princeton
Machine Learning, Learning Theory; High-dimensional Data Analysis; Optimization

Professor K.C. CHEUNG
BSc(Actuarial), PhD HK; ASA
Actuarial Science; Dependable System; Stochastic Ordinary; Risk Maturity; Optimal Insurance; Extreme Value Theory

Dr. Olivia T.K. CHOI
BSc, LABC, MSc, Oxford; PhD ISM
High Frequency Data Analysis; Market co-integration; Analysis of dually listed companies across different regions

Dr. L. FENG
BSc, PhD, University of Montreal
Statistical Machine Learning; Image Data Analysis; High-dimensional Statistics; Deep Learning

Dr. Edwin C.H. FONG
BA, Ming Chau; PhD, Oxford
Bayesian Inference, Bayesian Nonparametrics; Model Selection; Causal Inference

Dr. Y. GU
BSc, LSTC, PhD N Carolina
Survival Analysis; Non- and Semi-Parametric Inference; Biostatistics; Alzheimer’s Disease; Infectious Disease; Cancer

Dr. K. HAN
PhD HK
Computer Vision, Machine Learning, Deep Learning

Dr. Markus HOERTF
MSc, Syracuse, Dipl. Math. oec., Dr. rer. nat F&M Dependence Modeling, Computational Statistics; Data Science; Quantitative Risk Management

Dr. C.W. KWAN
BSc, PhD HK
Influential Observations; Multivariate Statistics; Non-linear Random Model

Dr. Eddy K.F. LAM
Associate Head (Teaching and Learning) and Chang
d. L. FENG
BSc, PhD, MS, Princeton
Machine Learning, Learning Theory; High-dimensional Data Analysis; Optimization

Professor K.C. CHEUNG
BSc(Actuarial), PhD HK; ASA
Actuarial Science; Dependable System; Stochastic Ordinary; Risk Maturity; Optimal Insurance; Extreme Value Theory

Dr. Olivia T.K. CHOI
BSc, LABC, MSc, Oxford; PhD ISM
High Frequency Data Analysis; Market co-integration; Analysis of dually listed companies across different regions

Dr. L. FENG
BSc, PhD, University of Montreal
Statistical Machine Learning; Image Data Analysis; High-dimensional Statistics; Deep Learning

Dr. Edwin C.H. FONG
BA, Ming Chau; PhD, Oxford
Bayesian Inference, Bayesian Nonparametrics; Model Selection; Causal Inference

Dr. Y. GU
BSc, LSTC, PhD N Carolina
Survival Analysis; Non- and Semi-Parametric Inference; Biostatistics; Alzheimer’s Disease; Infectious Disease; Cancer

Dr. K. HAN
PhD HK
Computer Vision, Machine Learning, Deep Learning

Dr. Markus HOERTF
MSc, Syracuse, Dipl. Math. oec., Dr. rer. nat. UFM Dependence Modeling, Computational Statistics; Data Science; Quantitative Risk Management

Dr. C.W. KWAN
BSc, PhD HK
Influential Observations; Multivariate Statistics; Non-linear Random Model

Dr. Eddy K.F. LAM
Associate Head (Teaching and Learning) and Chang

Dr. Hannie L. CHIU
BSc, MSc, City, BEc, MEc
Actuarial Science; Big Data Analytics and Risk Management; Social Media Analytics; Business/Health Informatics; Knowledge Management and Adoption; E-Business Strategies and Applications

Dr. David LEE
BSc(Actuarial), MPhil HK; PhD British Columbia, ASA
Copula Modeling, Extreme Value Theory; High-dimensional Dependence Structures; Multivariate Tail Dependence

Professor Stephen M.S. LEE
Interim Head of Department
BSc, PhD Caranto
Bootstrap, Resampling Methods; Statistical Theory; Asymptotics and Applications

Dr. Eric A.L. LI
BSc HK; MSc, PhD Syr
Real Option Theory and Applications; Resource Economics; Quantitative Trading; Quantum Computing, Blockchain and Smart Contracts

Professor G.D. LI
Associate Head (Research)
BSc, MSc, PKU
Time Series Analysis; Financial Economics; Quantile Regression; High Dimensional Data Analysis; Machine Learning

Dr. W.Y. LI
BSc, BSc, MSc, Swifte; PhD, London
Optimal Insurance; Extreme Value Theory; Machine Learning

Dr. L.Q. QU
Director, School of Computer Science and Engineering; Illumination Modeling; Deep Learning

Dr. C. WANG
BSc, ANL
Random Matrix Theory; Time Series Analysis; High-dimensional Data Analysis

Dr. K.P. WAT
BSc(Actuarial), PhD HK; SFHEA, FISA; FAPI
Actuarial Science; Financial Mathematics; Insurance Risk Models; Financial Risk Analysis; Enterprise Risk Management

Dr. L.Q. QU
Director, School of Computer Science and Engineering; Illumination Modeling; Deep Learning

Professor K.C. YUEN
BSc, MSc, PhD, Columbia
Insurance Risk Modeling; Financial Risk Analysis; Survival Analysis

Dr. Doris Y. ZHANG
BSc, Nankai; MSc, PhD CUHK
Big Data Analytics; Bayesian Methods; Biostatistics; Genetic Biomarkers; Public Health and Biomedical Research

Dr. Michael M.Y. ZHANG
BSc, UC Berkeley; PhD, U of A
Multivariate Analysis; Bayesian Non-parametrics; Scalable Inference

Dr. Z.Q. ZHANG
BSc, Nankai; MSc, CUHK; Normat, PhD HK
Time Series Analysis; Extreme Value Theory; Insurance Risk Modeling; Machine Learning

Dr. K. ZHU
BSc, LSTC, PhD HKUST
Time Series Analysis; Econometrics; Causal Inference
Admissions Requirements

Students who wish to pursue Majors in Decision Analytics, Risk Management or Statistics can apply for entry to HKU’s BSc programme (code: 6901). Under its ‘Single Admission Policy’, students will be provided with a choice of 14 Science Majors and 7 Intensive Majors, and may change their Major and Minor during their study.

JUPAS Stream

Minimum level required for JUPAS candidates:

- **English Language**: Level 3
- **Chinese Language**: Level 3
- **Mathematics**: Level 2
- **Citizenship and Social Development/Liberal Studies**: Attained/Level 2
- **Elective Subjects**: Category A subjects and Extended Module 1 or 2 in Mathematics (M1/M2)

*One of the elective subjects must be a Science subject: Biology, Chemistry, Physics, Combined Science, or Integrated Science

Admissions Formula

The programme will consider admissions based on the best 5 HKDSE subjects. The best 5 subjects must include English Language, Mathematics, the best Science elective subject*, plus the best two among the remaining Category A subjects and M1/M2.

Heavier weighting will be given to the following HKDSE subjects: Science elective subjects*, Mathematics, and M1/M2: each subject will be given a weighting of 1.5
